OVER VIEW

This activity sheet gives students 12 festive making challenges to complete across December. Each prompt encourages creativity, independent thinking and practical making through drawing, designing, constructing and decorating.
The challenges can be completed one per day, used as early-finisher activities, or selected individually as part of a Christmas art and design lesson.

YOU WILL NEED

Paper or card, pencils, colouring materials, scissors, glue and a selection of craft materials. Optional extras could include recycled materials, ribbon, wool, tissue paper, stickers or collage papers.

TEACHER TIP

Keep a box of scrap card, paper and reusable craft materials available so students can experiment without needing a set outcome.

LEARNING AIMS

Students will:

- explore different creative ideas and materials
- develop drawing, designing and making skills
- experiment with colour, shape, pattern and decoration
- make independent creative choices
- respond imaginatively to a simple design brief

HOW TO USE THIS ACTIVITY

Choose one challenge each day for 12 school days, or allow students to select their own prompt. Challenges can be completed as quick 10–20 minute activities or developed into longer making projects.
Encourage students to interpret the prompts in their own way. There is no single correct outcome.

ADAPTION IDEAS

For younger learners, demonstrate one simple example before they begin and offer pre-cut shapes or templates where needed.
For older or more confident students, add a design constraint such as using only recycled materials, limiting the colour palette, or creating an item for a specific person or purpose.
